GZURA — feature status for clients

Companion document: GZURA-User-Manual.md explains *how to use* the site. This document explains *what is built*, *what differs from your additional website requirements*, and *what is not in this release*.

Website: https://www.gzura.com

Last updated against the live site and the current frontend and API. Reference: your document "GZURA – Additional Website Development Requirements" (seven areas).

1. Summary at a glance

Area	Delivered	Partial	Not yet / not planned
Account and sign-in	Email/password, Google, phone OTP, onboarding, profile, password reset	—	—
Events (public)	List and detail: date, time, venue, price, member price, seats	—	—
Booking and payment	Free join, Razorpay paid join, unique pass, confirmation email, no duplicate enrollment, capacity limit	Payment states are Free / Pending / Paid, not your four-state model	Manual UPI with admin verify; Verified / Rejected / Refunded; WhatsApp group link on confirmation; guest paid checkout
Member after join	Digital pass and QR, Google Meet gate, My Learnings, course files, invoices	—	—
Host applications	Home-page form, staff approve/reject, host can create events	Application is interest + message, not a full qualification pack	Trainer revenue share, earnings, refunds, payouts
Staff admin	Dashboard, event approval, users, enrolled search, QR	Revenue chart is a simple total; check-in	Event-wise revenue / refund / attendance Excel; payment

	check-in, host-request export	re-scan still shows success	verification queue; financial audit log; email on every new registration
Website CMS	Event copy, photos, prices, and course files in admin	Marketing pages (home, blog, testimonials) are still edited by developers	Site-wide banners, announcements, testimonial approval, preview-before-publish for the whole site
Leads	Host requests in admin; event participants on each event; contact form saved	Join-page community form only starts sign-up	Contact inbox, duplicate detection, follow-ups, notes, retention tools
Trust	Terms, privacy, FAQ; event prices from approved records	Refund policy is in Terms, not on the payment button	Admin-verified testimonials and membership statistics

What the labels mean

- **Delivered** — Available on the site today; main flow works.
- **Partial** — The flow works end-to-end, but not every detail from your requirements is matched (often covered in Section 2).
- **Changed from spec** — We built something *different on purpose* or the current product already solves the need another way. See Section 2; this is not always a defect.
- **Not yet** — Expected capability from your document that is not implemented; may be scheduled if you want it in scope.
- **Not planned** — Out of scope unless you ask us to add it.

If something is **Changed from spec**, treat it as an intentional difference unless you tell us to match the original wording exactly. Items under **Not yet** are candidates for a future release if you approve them.

---

2. Changes from your specification

Your team shared seven additional requirement areas on top of earlier website corrections. The table lists where the live site **differs**.

Your document says	What we built	Why / note
Payment options including manual UPI	**Razorpay** checkout only (UPI inside Razorpay is possible when Razorpay enables it; there is no "pay to this UPI id and upload a screenshot" flow)	Same idea of paying online; different process. Manual UPI with staff verification is **not yet**
Payment statuses Pending, Verified, Rejected, Refunded	**Free**, **Pending**, **Paid**	Razorpay success marks the booking **Paid**. There is no staff verify/reject/refund queue
Unique confirmation plus GZURA WhatsApp group link	Unique **digital pass** link and QR; confirmation **email** with event details	Pass is the confirmation. WhatsApp group URL is **not yet** on the event or in the email

Admin verify manual payments, with reason and administrator name	Staff see **Free / Paid** on enrolled users; they do not approve a payment screenshot	**Not yet** — only needed once manual UPI exists
Event-wise revenue, pending, refund, attendance reports in Excel/CSV	Dashboard charts; **export** on **Host Requests** (trainer applications) to Excel, Word, or PDF	Attendee finance export is **not yet**. Dashboard revenue is a simple sum of event prices, not refunds or member prices
Email for new registrations and pending approvals even when the administrator is logged out	Email when a **host applies** and when an **event is submitted for approval**. In-app bell while staff are signed in	Email for **every new event registration** is **not yet**
Prevent duplicate attendance entries	First check-in time is stored; a second scan does not overwrite it	Re-scan can still look successful on screen. Stricter "already checked in" message is **not yet**
Trainer qualifications, proposed fees, request-changes before publish	Host form (profile-style fields and a message); events go **Pending** then **Approve** or **Reject**	No separate "request changes" status and no qualification file upload. Reject + reason is the current path
Trainer revenue-sharing, earnings, refunds, payouts	Event **price in INR** set by host/admin	Financial split with trainers is **not yet**
CMS for banners, posters, headings, announcements, testimonials	Staff edit **events** (text, posters, prices) without a developer. Home, blog, and testimonials are in the website code	Site-wide CMS is **not yet**. Existing event photos stay unless staff delete that event
Preview before publishing, content change history	Event **draft / pending / published**; **activity log** on the event	No preview of the whole marketing site. No history for home-page copy
Create events and update event and membership prices in admin	Event and member **event** prices in admin	**Membership** prices on the Join page are still marketing copy in code, not a product catalogue
Lead CRM: source, consent, follow-ups, notes, duplicates, export	Host applications in admin (search, status, export). Participants on each event. Contact form is stored	No contact inbox, no follow-up assignment, no duplicate merge. The Join-page form does **not** save a lead
Show cancellation/refund policy before payment	Policy in **Terms** and **FAQ**	Not repeated on the Razorpay button. Can be added on the event page if you want it in scope
Publish only verified testimonials and statistics	Testimonials and some "members / events" figures are curated in the site	No admin "verify this quote" workflow. Accuracy is an editorial process, not a system check

---

3. Event booking and payment

Delivered

- Public **Events** list and event page: date, time, venue, online or offline, price, member price, remaining seats when a limit is set.
- **Sign in** required to join or pay.
- **Free join** with confirmation on screen and by email (when email is configured).
- **Razorpay** for paid events; enrollment after successful verify.
- **One booking** per person per event (same email or account).
- **Capacity** — join is refused when the event is full.
- Unique **digital pass** (link and QR).
- Duplicate booking is blocked.

Partial

- Payment status is **Free / Pending / Paid**, not Verified / Rejected / Refunded.
- UPI can appear **inside Razorpay**; there is no separate manual UPI form.

Not yet

- Manual UPI to a GZURA id, screenshot or reference, and staff **verify / reject**.
- **Refunded** status and refund processing in admin.
- **WhatsApp group** link on the confirmation.
- Paying without an account.

---

4. Admin dashboard and finance

Delivered

- **Dashboard** with counts, charts, and top events.
- **Events:** search, filter, create, edit, approve, reject, feature.
- **Enrolled users** on each event (search; payment Free or Paid).
- **Users:** roles, block, create and edit.
- **Host Requests:** search, approve, reject, bulk actions, export Excel / Word / PDF.
- **QR check-in** for offline passes (open the scanner page; it is not in the side menu).
- Event **activity log** (submit, approve, reject).
- In-app notifications for pending hosts and events while staff are signed in.
- Email to staff for **new host applications** and **events waiting for approval** (when email is configured).

Partial

- Dashboard **revenue** is not a full accounts report (it does not track refunds or always use the amount actually paid).
- Check-in stores one timestamp; the screen does not clearly say “already checked in”.
- Export is for **host applications**, not for every event’s attendance and fees.

Not yet

- Central list of all payments to verify.
- Event-wise **pending / refund / attendance** download in Excel or CSV.
- Audit trail of **who changed a payment** and why.
- Email to staff for **every new event registration**.

---

5. Host a course and trainers

Delivered

- Public **host application** on the home page.
- Staff **approve** or **reject**; approved people work as hosts.
- Hosts create **events/courses** with description, photos, outline, INR price, seats, and (for online) Meet fields.
- Only **approved published** events are public.
- Edits to a live event can wait for staff approval.
- Hosts upload **course materials** for people who enrolled.
- Hosts see **enrolled users** on their own events.

Partial

- Application fields are name, contact, profession, interest, schedule preference, and a message — not a full CV and certificate pack.
- Staff can reject with a reason; there is no separate **request changes** status.

Not yet

- Agreed **revenue-share %**, trainer **earnings**, **refunds**, and **payout** records.
- Qualification document upload as a required step.

---

6. Website content

Delivered

- Staff add, edit, and remove **events**, including posters, headings, descriptions, prices, and galleries — without a developer for those items.
- Existing event posts and photos stay unless staff delete that event.
- Legal pages: privacy, terms, cookies, FAQ.

Partial

- Home, programmes, blog list, success stories, and testimonials are **in the website**, not in an admin CMS.
- Event **activity log** is history for events only.

Not yet

- Admin panel for banners, announcements, and approved testimonials.
- Preview of the whole site before publish.
- Content history for marketing pages.
- Admin control of **membership** prices on the Join page.
- Individual blog article pages.

---

7. Leads and participants

Delivered

- **Event participants** on each event (name, email, phone, city, profession) with search.
- **Host applications** in admin with status and export.
- **Members** in **Users**.
- **Contact** form is stored.

Partial

- Join-page community form collects interest and consent, then opens **Sign up**. It does not keep a separate enquiry record.
- Contact submissions have **no staff inbox** on the website.

Not yet

- One CRM for enquiries, members, and participants.
- Duplicate detection, assigned follow-ups, notes, enquiry statuses.
- Consent, retention, and deletion tools beyond normal user/admin edits.

---

8. Trust and credibility

Delivered

- **Terms** state that testimonials are not a promise of the same result.
- Event **price and seats** on the public page come from the approved event.
- Privacy, terms, cookies, FAQ.

Partial

- Refund and cancellation text lives in **Terms / FAQ**, not on the pay button.
- Membership statistics on marketing pages are written in the site, not calculated from a “verified claims” tool.

Not yet

- Workflow so only **verified** testimonials go live.
- Automatic check that every public claim matches approved data.

---

9. Not in this release

Do not treat these as defects unless you ask us to add them to scope:

- Manual UPI with staff verification and **Verified / Rejected / Refunded**.
- WhatsApp group link on booking confirmation.
- Trainer revenue share, payouts, and refunds ledger.
- Site-wide CMS (banners, blog articles, testimonial admin, announcements).
- Contact / enquiry CRM (inbox, follow-ups, duplicates).
- Event-wise finance and attendance Excel/CSV.
- Financial change audit log.
- Email to administrators on every new event registration.
- Refund policy shown inside the payment popup.
- Guest checkout for paid events.
- QR scanner link in the admin side menu (the page exists; bookmark it).

---

10. Suggested next priorities

If you want the site to match the additional requirements more closely, these are the highest-impact items to confirm with us:

1. **Manual UPI and payment verification** — screenshot or UTR, staff approve/reject with reason, then confirmation and pass.
2. **WhatsApp group link** per event, included in the confirmation after payment is confirmed.

3. **Event attendee export** — Excel/CSV with payment and check-in columns.
4. **Contact and enquiry inbox** — so Contact and Join interest are visible to staff without the database.
5. **Refund / cancellation** text on the event page before pay.
6. **Clearer check-in** message when a pass was already scanned.
7. **CMS for testimonials and banners** — if you need to change the home page without a developer.
8. **Trainer payouts** — only if you are ready to agree percentages and a payout process.

Indicative order (not a contract): payments and WhatsApp first, then reports and CRM, then CMS, then trainer finance.

---

11. Documents to send

When sharing materials with testers or stakeholders, we recommend:

Document	Format	Purpose
User manual	PDF or Word	Step-by-step how to use the site
Feature status	PDF or Word	This file: done, partial, missing, and **Section 2** differences from your requirements

Suggested email line: *"Section 2 of the feature status document lists differences from the additional website requirements you shared; the rest shows what is live versus still to do. The user manual is the how-to for members, hosts, and administrators."*

GZURA – Additional Website Development Requirements — reference specification for this status document.
